this book provides a solution to the ecological inference problem which has plagued users of statistical methods for over seventy five years how can researchers reliably infer individual level behavior from aggregate ecological data in political science this question arises when individual level surveys are unavailable for instance local or comparative electoral politics unreliable racial politics insufficient political geography or infeasible political history this ecological inference problem also confronts researchers in numerous areas of major significance in public policy and other academic disciplines ranging from epidemiology and marketing to sociology and quantitative history although many have attempted to make such cross level inferences scholars agree that all existing methods yield very inaccurate conclusions about the world in this volume gary king lays out a unique and reliable solution to this venerable problem king begins with a qualitative overview readable even by those without a statistical background he then unifies the apparently diverse findings in the methodological literature so that only one aggregation problem remains to be solved he then presents his solution as well as empirical evaluations of the solution that include over 16 000 comparisons of his estimates from real aggregate data to the known individual level answer the method works in practice king s solution to the ecological inference problem will enable empirical researchers to investigate substantive questions that have heretofore proved unanswerable and move forward fields of inquiry in which progress has been stifled by this problem
