It begins with a review of the scientific basis of acupuncture and relevant research. An introduction to the philosophy and theory of traditional Chinese medicine is then followed by a detailed account of diagnosis and description of the Chinese system of channels, functional organs and most important acupuncture points. The remainder of the book is devoted to treatment based on western modes of diagnosis. The methods and applications of needling and moxibustion are described and the most important points are given for frequently encountered diseases. From a review in a German journal, this book was written by a physician for physicians and medical students alike and is characterized by a high degree of practical relevance. In addition to describing the 120 most important acupuncture points and depicting them in clear illustrations, this volume also provides a survey of the therapeutic principles and the selection of acupuncture points for the most important diseases.

This book is for modern medically trained practitioners from various fields. It is also for anyone who wishes to study acupuncture and would like to know more about the core concepts of traditional Chinese medicine. It discusses the differentiation of syndromes and shows concisely how to form a correct acupuncture treatment plan. Throughout the book there is an emphasis on the use of modern medical language, medical terms and anatomical locations to make this medical art and science more accessible to the modern reader.
