preface this book is about semantics and logic more specifically it is about the semantics and logic of natural language and even more specifically than that it is about a particular way of dealing with those subjects known as discourse representation theory or drt drt is an approach towards natural language semantics which some thirteen years ago arose out of attempts to deal with two distinct problems the first of those was the semantic puzzle that had been brought to contemporary attention by geach's notorious donkey sentences sentences like if pedro owns some donkey he beats it in which the anaphoric connection we perceive between the indefinite noun phrase some donkey and the pronoun it may seem to conflict with the existential meaning of the word some the second problem had to do with tense and aspect some languages for instance french and the other romance languages have two morphologically distinct past tenses a simple past the french *passé simple* and a continuous past the french *imparfait* to articulate precisely what the difference between these tenses is has turned out to be surprisingly difficult

in lively and readable prose arthur presents a new approach to the study of logic one that seeks to integrate methods of argument analysis developed in modern informal logic with natural deduction techniques the dry bones of logic are given flesh by unusual attention to the history of the subject from pythagoras the stoics and indian buddhist logic through lewis carroll venn and boole to russell frege and monty python a previous edition of this book appeared under the title natural deduction this new edition adds clarifications of the notions of explanation validity and formal validity a more detailed discussion of derivation strategies and another rule of inference reiteration
