human greatness has many connotations since the requirements for membership in this category are

vague and poorly defined admittance to the mount olympus is frequently erratic and subjective especially in view of a wide penumbra zone of border cases nevertheless rising above a twilight zone of debatable cases there are individuals whose right for membership is unquestionable in science one of the unequivocal criteria for greatness relates to how far one's scientific achievement affects the opening of new horizons and points to directions for future development and progress unveiling new visions can derive only from creative people who conceive original ideas and concepts and who are daring enough to promote them against the indifference or opposition of the establishment maintaining the integrity and the faith to one's own ideals may require extraordinary strength of character up to courting persecution or even death as happened in the middle ages and more recently in the first half of this century with regard to cecile and oskar vogt whose lives and accomplishments are described in this book thus the greatness of the vogts is based both on their penetrating vision of the future for brain research and on the sterling quality of their character which sustained a test of fire during the nazi years in germany
