this book reports research on the problem solution rhetorical pattern which has to date received very little attention in corpus based studies insights

from genre analysis and systemic functional grammar are also applied to the analysis of the problem solution pattern thus moving towards a more multi faceted analysis of corpus data the pattern is investigated in two specialized corpora of technically oriented report writing a professional corpus and a student corpus using a key word and key key word analysis phraseological analyses of key words in both corpora are presented data show that students writing lacks a range of lexico grammatical patternings for expressing the problem and solution elements of the pattern the book concludes with some pedagogic implications and applications of the findings suggested concordancing activities are discussed within the context of key issues in the field of data driven learning

this third volume of problems from the william lowell putnam competition is unlike the previous two in that it places the problems in the context of important mathematical themes the authors highlight connections to other problems to the curriculum and to more advanced topics the best problems contain kernels of sophisticated ideas related to important current research and yet the problems are accessible to undergraduates the solutions have been compiled from the american mathematical monthly mathematics magazine and past competitors multiple solutions enhance the understanding of the audience explaining techniques that have relevance to more than the problem at hand in addition the book contains suggestions for further reading a hint to each problem separate from the full solution and background information about the competition the book will appeal to students teachers professors and indeed anyone interested in problem solving as a gateway to a deep understanding of mathematics

this book contains a selection of more than 500 mathematical problems and their solutions from the phd qualifying examination papers of more than ten famous american universities the problems cover six aspects of graduate school mathematics algebra differential geometry topology real analysis complex analysis and partial differential equations the depth of knowledge involved is not beyond the contents of the textbooks for graduate students while solution of the problems requires deep understanding of the mathematical principles and skilled techniques for students this book is a valuable complement to textbooks for lecturers teaching graduate school mathematics a helpful reference copyright libri gmbh all rights reserved

discussing 50 geometry problems with detailed solutions

this book describes in detail a series of new strategies to solve problems mainly in mathematics new techniques are presented which have been tested in class by the author for over thirty years these techniques advance the state of the art in problem solving and extend existing methods of such great mathematicians and cognitive psychologists such as g polya h a simon w wickelgren and j greeno the book provides each technique with a detailed description and then illustrates it through a number of problems spanning a wide spectrum of mathematical areas
