china is in the midst of transitioning from a manufacturing based economy to one driven by innovation and knowledge this up to date analysis evaluates china s state led approach to science and technology and its successes and failures in recent decades china has seen huge investments in high tech science parks a surge in home grown top ranked global companies and a significant increase in scientific publications and patents helped by state policies and a flexible business culture the country has been able to leapfrog its way to a more globally competitive position however the authors argue that this approach might not yield the same level of progress going forward if china does not address serious institutional organizational and cultural obstacles while not impossible this task may well prove to be more difficult for the chinese communist party than the challenges that china has faced in the past

an uncoded multimedia transmission umt system is one that skips quantization and entropy coding in compression and all subsequent binary operations including channel coding and bit to symbol mapping of modulation by directly transmitting non binary symbols with amplitude modulation the uncoded system avoids the annoying cliff effect observed in the coded transmission system this advantage makes uncoded transmission more suited to both unicast in varying channel conditions and multicast to heterogeneous users particularly in the first part of uncoded multimedia transmission we consider how to improve the efficiency of uncoded transmission and make it on par with coded transmission we then address issues and challenges regarding how to better utilize temporal and spatial correlation of images and video in the uncoded transmission to achieve the optimal transmission performance next we investigate the resource allocation problem for uncoded transmission including subchannel bandwidth and power allocation by properly allocating these resources uncoded transmission can achieve higher efficiency and more robust performance subsequently we consider the image and video delivery in mimo broadcasting networks with diverse channel quality and varying numbers of antennas across receivers finally we investigate the cases where uncoded transmission can be used in conjunction with digital transmission for a balanced efficiency and adaptation capability this book is the very first monograph in the general area of uncoded multimedia transmission written in a self contained format it addresses both the fundamentals and the applications of uncoded transmission it gives a systematic introduction to the fundamental theory and concepts in this field and at the same time also presents specific applications that reveal the great potential and impacts for the technologies generated from the research in this field by concentrating several important studies and developments currently taking place in the field of uncoded transmission in a single source this book can reduce the time and cost required to learn and improve skills and knowledge in the field the authors have been actively working in this field for years and this book is the final essence of their years of long research in this field the book may be used as a collection of research notes for researchers in this field a reference book for practitioners or

engineers as well as a textbook for a graduate advanced seminar in this field or any related fields the references collected in this book may be used as further reading lists or references for the readers
