this book features selected and peer reviewed lectures presented at the 3rd semigroups of operators theory and applications conference held in kazimierz dolny poland in october 2018 to mark the 85th birthday of jan kisyński held every five years the conference offers a forum for mathematicians using semigroup theory to discover what is happening outside their particular field of research and helps establish new links between various sub disciplines of semigroup theory stochastic processes differential equations and the applied fields the book is intended for researchers postgraduate and

senior students working in operator theory partial differential equations probability and stochastic processes analytical methods in biology and other natural sciences optimisation and optimal control the theory of semigroups of operators is a well developed branch of functional analysis its foundations were laid at the beginning of the 20th century while hille and yosida's fundamental generation theorem dates back to the forties the theory was originally designed as a universal language for partial differential equations and stochastic processes but at the same time it started to become an independent branch of operator theory today it still has the same distinctive character it develops rapidly by posing new internal questions and in answering them discovering new methods that can be used in applications on the other hand it is being influenced by questions from pde's and stochastic processes as well as from applied sciences such as mathematical biology and optimal control and as a result it continually gathers new momentum however many results both from semigroup theory itself and the applied sciences are phrased in discipline specific languages and are hardly known to the broader community

this book synthesizes the game theoretic modeling of decision making processes and an ancient moral requirement called the golden rule of ethics for this rule states behave to others as you would like them to behave to you the gr is one of the oldest most widespread and specific moral requirements that appear in christianity islam judaism buddhism and confucianism this book constructs and justifies mathematical models of dynamic socio economic processes and phenomena that reveal the mechanism of the gr and are based on the concept of berge equilibrium the gr can be naturally used for resolving or balancing conflicts and its altruistic character obviously excludes wars blood letting and armed clashes the previous book by the authors the berge equilibrium a game theoretic framework for the golden rule of ethics covers the static case of the gr in this book the dynamic case of the gr is investigated using the altruistic concept of berge equilibrium and three factors as follows 1 a modification of n n krasovskii's mathematical formalization of differential positional games dpgs in view of the counterexamples given by a i subbotin and a f kononenko 2 the method of guiding control proposed by n n krasovskii and 3 the germier convolution of the payoff functions of different players additionally this book features exercises problems and solution tips collected together in appendix 1 as well as new approaches to conflict resolution as presented in appendices 2 to 4 this book will be of use to undergraduate and graduate students and experts in the field of decision making in complex control and management systems as well as anyone interested in game theory and applications
