The book entitled biodiversity conservation and sustainable utilization of biological resource is a result of national conference on sustainable utilization of biological resources held during 16-18 March 2001 at Department of Botany Dr. Harisingh Gour Vishwavidyalaya Sagar, M.P. India. Biological diversity is the result of interaction between climate, organisms, topography, parent soil, materials, time, and heredity. The tropics are the ideal places for such an interaction. Indian region, having a geographical area of 339 million hectares, is quite rich in biodiversity with a sizeable percentage of endemic flora and fauna. This richness in biodiversity is due to immense variety of climate and altitudinal conditions coupled with varied ecological habitats. From the humid tropical Western Ghats to the hot deserts of Rajasthan, from the cold desert of Ladakh and the icy mountains of the Himalayas to the warm coast of peninsular India, the country is a very important vavilovian center of biodiversity and origin of over 167 important cultivated plant species and some domesticated animals. The present book contains articles by eminent scientists of the country on different aspects related to the subject. It contains up to
