the mentality that consumerism and economic growth are cure alls is one of the biggest obstacles to real sustainability but any change seems impossible unthinkable our contemporary paradox finds us relying for our well being on consumer driven economic growth that we actually can't afford not in environmental economic or social terms although architecture and design have long been seen as engines for consumerism and growth increasing numbers of designers are concerned about the problems resulting from growth but designers face a paradox of their own in scenarios of sustainable consumption where people consume or build significantly less what will be left for designers to do this book informed by recent research into the viability of a steady state economy sets an agenda for addressing the designer's paradox of sustainable consumption the agenda includes ways that architecture and design can help transition us towards a new kind of economy that prioritizes real wellbeing rather than economic growth packed with examples and illustrations the book argues that taking action or activism is an important but so far underexplored way for architects and designers to confront consumerism the first chapters explore how economic growth and consumerism shape and are shaped by the professions of architecture product and landscape design and how we can understand the problem of consumerism as four main challenges that designers are already addressing the book maps out the main issues surrounding the development of metrics that designers and others can use to measure wellbeing instead of simply measuring economic growth the second half of the book looks at how design activism works and its connection to growth and consumerist issues these chapters examine how activist practices are financed highlight five specific methods that designers use in working for social change and investigate the power of these methods the book concludes with a consideration of what design's role might be in a post growth society

graphic design for architects is a handbook of techniques explanations and examples of graphic design most relevant to architects the book covers a variety of scales of graphic design everything from portfolio design and competition boards to signage and building super graphics to address every phase of architectural production this book combines and expands on information typically found in graphic design information design and architectural graphics books as architectural communication increases to include more territory and components of a project it is important for designers to be knowledgeable about the various ways in which to communicate visually for instance signage should be designed as part of the process not something added at the end of a project and the portfolio is a manifestation of how the designer works not just an application to sell a design sensibility in thinking about architecture as a systematic and visual project the graphic design techniques outlined in this book will help architects process organize and structure their work through the lens of visual communication each chapter is titled and organized by common architectural modes of communication and production the chapters speak to architects by directly addressing projects and topics relevant to their work while the information inside each chapter presents graphic design methods to achieve the architects work in this way readers don't have to search through graphic design books to figure out what

here for the first time a wide range of world famous architects sketches from the renaissance to the present day can be seen in a single volume the sketches have been selected to represent the concepts or philosophies of the key movements in architecture in order to develop an overall picture of the role of the sketch in the development of architecture the book illustrates the work of designers as diverse as andrea palladio erich mendelsohn sir edwin lutyens gianlorenzo bernini le corbusier michelangelo alvar aalto sir john soane francesco borromini walter gropius and contemporary architects tadao ando zaha hadid and frank gehry to name but a few each chronologically placed sketch is accompanied by text providing details about the architect s life a look at the sketch in context and the connection to specific buildings where appropriate style media and meaning are also discussed developing an explanation of the architect s thinking and intentions bookjacket

introducing a collection of eighteen short essays developed by designer and educator david erdman suggests that short form writing might serve as the proper vehicle for architectural discourse to flourish in the 21st century speculating that concise pieces of information attributed to the blogging and tweeting generation of architects is the contemporary format for the delivery of critical discourse erdman uses his essays to illustrate how an iterative approach to short form writing might be the most efficient way for architecture to open new critical dialogues this book further suggests that discourse is no longer and will not be in the near future

delivered in extended holistic polemical packages instead erdman posits that precise undiluted snippets of discourse which can be formed into broader strains of thinking by the user or audience simulate an open source information platform that is adept to the contemporary subject and architectural discipline would be more suitable

architects who engaged with cybernetics artificial intelligence and other technologies poured the foundation for digital interactivity in architectural intelligence molly wright steenson explores the work of four architects in the 1960s and 1970s who incorporated elements of interactivity into their work christopher alexander richard saul wurman cedric price and nicholas negroponte and the mit architecture machine group all incorporated technologies including cybernetics and artificial intelligence into their work and influenced digital design practices from the late 1980s to the present day alexander long before his famous 1977 book a pattern language used computation and structure to visualize design problems wurman popularized the notion of information architecture price designed some of the first intelligent buildings and negroponte experimented with the ways people experience artificial intelligence even at architectural scale steenson investigates how these architects pushed the boundaries of architecture and how their technological experiments pushed the boundaries of technology what did computational cybernetic and artificial intelligence researchers have to gain by engaging with architects and architectural problems and what was this new space that emerged within these collaborations at times steenson writes the architects in this book characterized themselves as anti architects and their work as anti architecture the projects steenson examines mostly did not result in constructed buildings but rather in design processes and tools computer programs interfaces digital environments alexander wurman price and negroponte laid the foundation for many of our contemporary interactive practices from information architecture to interaction design from machine learning to smart cities
