original and awe inspiring an exhilarating tour of some of the most profound and important ideas in biology new scientist where does dna come from what is consciousness how did the eye evolve drawing on a treasure trove of new scientific knowledge nick lane expertly reconstructs evolution s history by describing its ten greatest inventions from sex and warmth to death resulting in a stunning account of nature s ingenuity

one of the deepest most illuminating books about the history of life to have been published in recent years the economist the earth teems with life in its oceans forests skies and cities yet there s a black hole at the heart of biology we do not know why complex life is the way it is or for that matter how life

first began in the vital question award winning author and biochemist nick lane radically reframes evolutionary history putting forward a solution to conundrums that have puzzled generations of scientists for two and a half billion years from the very origins of life single celled organisms such as bacteria evolved without changing their basic form then on just one occasion in four billion years they made the jump to complexity all complex life from mushrooms to man shares puzzling features such as sex which are unknown in bacteria how and why did this radical transformation happen the answer lane argues lies in energy all life on earth lives off a voltage with the strength of a lightning bolt building on the pillars of evolutionary theory lane s hypothesis draws on cutting edge research into the link between energy and cell biology in order to deliver a compelling account of evolution from the very origins of life to the emergence of multicellular organisms while offering deep insights into our own lives and deaths both rigorous and enchanting the vital question provides a solution to life s vital question why are we as we are and indeed why are we here at all

oxygen has had extraordinary effects on life three hundred million years ago in carboniferous times dragonflies grew as big as seagulls with wingspans of nearly a metre researchers claim they could have flown only if the air had contained more oxygen than today probably as much as 35 per cent giant spiders tree ferns marine rock formations and fossil charcoals all tell the same story high oxygen levels may also explain the global firestorm that contributed to the demise of the dinosaurs after the asteroid impact the strange and profound effects that oxygen has had on the evolution of life pose a riddle which this book sets out to answer oxygen is a toxic gas divers breathing pure oxygen at depth suffer from convulsions and lung injury fruit flies raised at twice normal atmospheric levels of oxygen live half as long as their siblings reactive forms of oxygen known as free radicals are thought to cause ageing in people yet if atmospheric oxygen reached 35 per cent in the carboniferous why did it promote exuberant growth instead of rapid ageing and death oxygen takes the reader on an enthralling journey as gripping as a thriller as it unravels the unexpected ways in which oxygen spurred the evolution of life and death the book explains far more than the size of ancient insects it shows how oxygen underpins the origin of biological complexity the birth of photosynthesis the sudden evolution of animals the need for two sexes the accelerated ageing of cloned animals like dolly the sheep and the surprisingly long lives of bats and birds drawing on this grand evolutionary canvas oxygen offers fresh perspectives on our own lives and deaths explaining modern killer diseases why we age and what we can do about it advancing revelatory new ideas following chains of evidence the book ranges through many disciplines from environmental sciences to molecular medicine the result is a captivating vision of contemporary science and a humane synthesis of our place in nature this remarkable book will redefine the way we think about the world

a biochemist building on the pillars of evolutionary theory and drawing on cutting edge research into the link between energy and genes argues that the

evolution of multicellular life was the result of a single event

a game changing book on the origins of life called the most important scientific discovery since the copernican revolution in the observer

where did human beings come from why is there such a huge variety of living things on earth the theory of evolution answers these and many more questions we may have on where we come from and how life has developed this fascinating book looks at the historical controversies that surround the theory of evolution and tells the stories of the scientists who worked on the theory it also examines how the theory of evolution was arrived at how it was tested and what impact the theory has had on our understanding of science today

we live in crisis ridden times civilization is repeatedly ravaged by diseases recessions wars and international terror while global climate change and the existence of nuclear weapons could soon put an end to humanity what are we to do serious problems like these raise many moral questions but people often disagree sometimes vehemently about the answers moral disagreements pose a fundamental question could some moral opinions be better than others are there any moral truths at all or is right and wrong merely a matter of perspective depending on the eye of the beholder perhaps moral beliefs are nothing but a kind of superstition like beliefs about vampires or greek gods and goddesses in this refreshingly unorthodox introduction danish philosopher thomas Østergaard deals with these questions in a novel way written as a philosophical dialogue the book makes the various positions come alive through four people s interchange of ideas and arguments continuously interspersed with everyday examples as well as intriguing thought experiments as a witness to this debate the reader is invited to ponder the nature of morality the possibility of resolving our moral differences and the puzzling and provocative question why should i care about morality

trivium in practice brings together a series of case studies written by educators who were inspired by martin robinson s first book trivium 21c taken together these case studies reveal how regardless of setting or sector the trivium can deliver a truly great education for our children great teaching has the three elements of the trivium at its centre grammar foundational knowledge and skills dialectic questioning thinking and practising rhetoric the ability to express oneself beautifully persuasively and articulately in any form the trivium is a helpful way for a teacher to think about the art of teaching through the model of the trivium traditional values and progressive ideals can coexist both knowledge and cultural capital matter and skills are interwoven with content the trivium isn t a gimmick to be imposed on to a curriculum it is a tried and tested approach to education it is the key to great

teaching and learning as this group of educators discovered the case studies are from tom sherrington sam gorse nick david hall nigel matthias nick barnsley mike grenier nick rose and carl hendrick these educators have found that trivium education has brought a range of tangible benefits for their students these include greater confidence enhanced development of rigorous analytical skills improved oracy and confidence in speaking in front of audiences an appreciation of the value of acquiring and applying knowledge refined skills in questioning and debating developed creativity independence and critical thinking the ability to form and express considered opinions and importantly the enjoyment of learning fundamentally these educators have found that the trivium has helped them to define and deliver their ideas about the education they want for their students helping them to become engaged lifelong learners in the process there is no one right way to do the trivium it is a tradition that can be adapted it is the art of education and engages teachers in the art of being educators just as each great artist learns from a tradition and refashions it adds to it disrupts it so do the teachers who have contributed to this book on their canvas in their school each contributor is creating and re creating trivium education in their own way discover the potential of the trivium and be inspired to do the same in your own classroom suitable for teachers and leaders in any educational setting

this volume traces the origins and evolution of the idea of human extinction from the ancient presocratics through contemporary work on existential risks many leading intellectuals agree that the risk of human extinction this century may be higher than at any point in our 300 000 year history as a species this book provides insight on the key questions that inform this discussion including when humans began to worry about their own extinction and how the debate has changed over time it establishes a new theoretical foundation for thinking about the ethics of our extinction arguing that extinction would be very bad under most circumstances although the outcome might be on balance good throughout the book graphs tables and images further illustrate how human choices and attitudes about extinction have evolved in western history in its thorough examination of humanity's past this book also provides a starting point for understanding our future although accessible enough to be read by undergraduates human extinction contains new and thought provoking research that will benefit even established academic philosophers and historians

should technology be used to improve human faculties such as cognition and longevity this thought provoking dialogue between transhumanism and religion examines enhancement technologies that could radically alter the human species transhumanism or human enhancement is an intellectual and cultural movement that advocates the use of emerging technologies to change human traits although they may sound like science fiction the possibilities suggested by transhumanism are very real and the questions they raise have no easy answers if these enhancements especially major ones like the indefinite extension of healthy human life become widely available they would arguably have a more radical impact on humankind than any other

development in history this book comprises essays that explore transhumanism and the issues that surround it addressing numerous fascinating questions posed by scholars of religion from various traditions how will immortality or extreme longevity change our religious beliefs and practices how might pharmaceuticals enhance spiritual experiences will post human technologies be available to all persons or will a superior post human race arise to dominate the human species the discussions are as intriguing as the future they suggest

a city bathed in blood and chaos the survivors have failed in their mission to guard the idol concert diamond s main body has been broken karan has fallen victim to an incurable curse and with garos dead they have no clue how to help her as if the situation isn t dire enough argus the leader of combat masters and nick s old mentor appears before him but not even union is a match for labyrinth city s most powerful warrior when an ally arrives it seems the survivors might be able to turn the tables however any hope is shattered when callios the sword of tasuki joins the fray leading an entire pack of white masks is this the end for the disillusioned adventurers

this thought provoking publication covers a wide range of innovative areas of research and technologies that are unlocking groundbreaking new potentials in science it contains important scientific information gleaned from the lectures of some of the world s experts in their respective fields the book offers exceptional scientific insights oftentimes addressing challenges before they are even recognized as questions chronicling the revolutionary ideas of nobel laureates winners of wolf prize us national medal of science and other notable scientists

from the renowned biochemist and author of the vital question an illuminating inquiry into the krebs cycle and the origins of life nick lane s exploration of the building blocks that underlie life s big fundamental questions the origin of life itself aging and disease have shaped my thinking since i first came across his work he is one of my favorite science writers bill gates what brings the earth to life and our own lives to an end for decades biology has been dominated by the study of genetic information information is important but it is only part of what makes us alive our inheritance also includes our living metabolic network a flame passed from generation to generation right back to the origin of life in transformer biochemist nick lane reveals a scientific renaissance that is hiding in plain sight how the same simple chemistry gives rise to life and causes our demise lane is among the vanguard of researchers asking why the krebs cycle the perfect circle at the heart of metabolism remains so elusive more than eighty years after its discovery transformer is lane s voyage as a biochemist to find the inner meaning of the krebs cycle and its reverse why it is still spinning at the heart of life and death today lane reveals the beautiful violent world within our cells where hydrogen atoms are stripped from the carbon skeletons of food and fed to the ravenous beast of

oxygen yet this same cycle spinning in reverse also created the chemical building blocks that enabled the emergence of life on our planet now it does both how can the same pathway create and destroy what might our study of the krebs cycle teach us about the mysteries of aging and the hardest problem of all consciousness transformer unites the story of our planet with the story of our cells what makes us the way we are and how it connects us to the origin of life enlivened by lane s talent for distilling and humanizing complex research transformer offers an essential read for anyone fascinated by biology s great mysteries life is at root a chemical phenomenon this is its deep logic

in a critical intervention into the bioethics debate over human enhancement philosopher melinda hall tackles the claim that the expansion and development of human capacities is a moral obligation hall draws on french philosopher michel foucault to reveal and challenge the ways disability is central to the conversation the bioethics of enhancement includes a close reading and analysis of the last century of enhancement thinking and contemporary transhumanist thinkers the strongest promoters of the obligation to pursue enhancement technology with specific attention to the work of bioethicists nick bostrom and julian savulescu the book challenges the rhetoric and strategies of enhancement thinking these include the desire to transcend the body and decide who should live in future generations through emerging technologies such as genetic selection hall provides new analyses rethinking both the philosophy of enhancement and disability arguing that enhancement should be a matter of social and political interventions not genetic and biological interventions hall concludes that human vulnerability and difference should be cherished rather than extinguished this book will be of interest to academics working in bioethics and disability studies along with those working in continental philosophy especially on foucault

the deepest shadows can hide behind the brightest lights after a fierce battle nick and the others succeeded in crushing the demon god worshipper white mask the guild is extremely happy with their performance so the survivors are entrusted with nick s dream job guarding an idol concert but when they discover counterfeit tickets and a connection to the demon god s adherents they start to doubt that this is a normal escort mission and that s all before sun knight captain alice shares her suspicions about nick s former party member garos shaking him to the core karan is there to lend her support but her feelings for nick seem to be changing

the fourth estate

nick zem face off against nick s one time mentor argus and the sword of tasuki deep in the labyrinth tiana confronts bellocchio her former teacher

barricaded inside starmine hall karan searches for the magic mirror of marde the key to turning the tide of battle filled with a newfound power as the enemy breaks through tiana s siege the survivors are brought together once more but will they be able to stop the sword of tasuki from completing his true plan of resurrecting the demon god

mitochondria are tiny structures within all our cells believed to have once evolved from bacteria living independent lives drawing on cutting edge research this book explores the fundamental role they play in some of the biggest themes in biology evolution the origin of the sexes in growth ageing disease and in death
