paolo favilli provides both students and scholars with an original reading of themes and issues found in karl marx s das kapital and its connections with present day challenges by way of continuous cross referencing between present and past favilli demonstrates claims that the scientific status of das kapital advanced by countless texts since its original publication are themselves deeply imbued by the spirit of the times if in 1963 jean paul sartre could write that marxism was the unsurpassable philosophical horizon of our times what could make an undergraduate student today consider such a claim plausible informed

once in a while the world astonishes itself anxious incredulity replaces intellectual torpor and a puzzled public strains its antennae in every possible direction desperately seeking explanations for the causes and nature of what just hit it 2008 was such a moment not only did the financial system collapse and send the real economy into a tailspin but it also revealed the great gulf separating economics from a very real capitalism modern political economics has a single aim to help readers make sense of how 2008 came about and what the post 2008 world has in store the book is divided into two parts the first part delves into every major economic theory from aristotle to the present with a determination to discover clues of what went wrong in 2008 the main finding is that all economic theory is inherently flawed any system of ideas whose purpose is to describe capitalism in mathematical or engineering terms leads to inevitable logical inconsistency an inherent error that stands between us and a decent grasp of capitalist reality the only scientific truth about capitalism is its radical indeterminacy a condition which makes it impossible to use science s tools e g calculus and statistics to second guess it the second part casts an attentive eye on the post war era on the breeding ground of the crash of 2008 it distinguishes between two major post war phases the global plan 1947 1971 and the global minotaur 1971 2008 this dynamic new book delves into every major economic theory and maps out meticulously the trajectory that global capitalism followed from post war almost centrally planned stability to designed disintegration in the 1970s to an intentional magnification of unsustainable imbalances in the 1980s and finally to the most spectacular privatisation of money in the 1990s and beyond modern political economics is essential reading for economics students and anyone seeking a better understanding of the 2008 economic crash

Our socio-economic innovation ecosystem is riddled with ever increasing complexity as we are faced with more frequent and intense shocks such as COVID-19. Unfortunately, addressing complexity requires a different kind of economic governance. There is increasing pressure on economics to not only go beyond its traditional mainstream boundaries but also to tackle real world problems such as fostering structural change, enhancing sustained growth, promoting inclusive development in the era of the digital economy and boosting green growth while addressing the divide between the financial sector and the real economy. This book demonstrates how to apply complexity science to economics in an effective and instructive way in the interest of life-enhancing policies. The book revolves around the non-negligible problem of why economics to date seems to be inadequate in guiding economic governance to navigate through real and ever intensifying complex socio-economic and environmental challenges. With its interdisciplinary approach, the book scans the nuanced nexus between complexity and economics by incorporating as well as transcending the state of the art literature. It identifies ways to trigger opportunities for behavioural change in the economic profession with respect to how and what to teach, introducing and developing further complexity economics taking into account the configuration of its main principles and outlining the silhouette of next generation economic governance. The book deciphers recommendations for economic theory, practice, education and economic governance. It will be of interest to students, scholars, academics, think tank researchers and economic policy practitioners at the national and/or supranational levels.
