model transformations are the glue that tie modelling activities together if you've used modelling in anger then whether you know it or not you've used model transformations they come in all shapes and sizes from moving models between different tools to generating implementations model transformations have humble beginnings at one point not long ago it was said by many in the know that the way forward in model transformations was to use xslt that this idea now raises a wry smile shows how far the model transformation community has come in a short time where once model transformations were hacked together in a variety of unsuitable languages we now have a number of powerful dedicated languages and theories at our disposal since 2008 the icmt conference series has played a huge part in advancing the subject and this third edition was no different the theories and languages presented at icmt have allowed principled model transformations to play an ever greater part in real systems of course there is still much more to do we need our model transformations languages and theories to scale further allow greater expressivity be more extensible and aid reusability and we lack empirically backed studies of model transformations in use doubtless you can think of other gaps yet though some real world challenges lie just beyond our reach each year sees once daunting problems conquered much of that progress is now driven by icmt and this year's edition showed how model transformations are increasingly being used in previously unfamiliar areas

since 1994 the european commission has undertaken various actions to expand the use of earth observation eo from space in the union and to stimulate value added services based on the use of earth observation satellite data by supporting research and technological development activities in this area dg xii responded to the need to increase the cost effectiveness of space derived environmental information at the same time it has contributed to a better exploitation of this unique technology which is a key source of data for environmental monitoring from local to global scale maviric is part of the investment made in the context of the environment and climate programme 1994 1998 to strengthen applied techniques based on a better understanding of the link between the remote sensing signal and the underlying bio geo physical processes translation of this scientific know how into practical algorithms or methods is a priority in order to convert more quickly effectively and accurately space signals into geographical information now the availability of high spatial resolution satellite data is rapidly evolving and the fusion of data from different sensors including radar sensors is progressing well the question arises whether existing machine vision approaches could be advantageously used by the remote sensing community automatic feature object extraction from remotely sensed images looks very attractive in terms of processing time standardisation and implementation of operational processing chains but it remains highly complex when applied to natural scenes

learn to build and optimize attractive functional web sites for smartphones today mobile devices outnumber desktop and laptop computers three to one skill in developing web sites that work on mobile devices is in demand and this friendly step by step guide shows how to build and optimize sites using html5 and other standard web development tools building web sites that work for all types of smartphones and tablets including iphones ipads android devices and blackberry devices is a skill much in demand as mobile devices

outpace both desktop and laptop computers and this book gets you started guides you through creating and optimizing mobile sites with html css and javascript covers html5 webkit extensions platform variations accommodating different browsers security issues and making mobile sites richer with flash graphics and video includes code for differences in mobile app design and navigation including touch devices html css and javascript mobile development for dummies makes it easy to start developing great sites for mobile devices

the number of protein sequences grows each year yet the number of structures deposited in the protein data bank remains relatively small the importance of protein structure prediction cannot be overemphasized and this volume is a timely addition to the literature in this field protein structure prediction methods and protocols is a departure from the normal methods in molecular biology series format by its very nature protein structure prediction demands that there be a greater mix of theoretical and practical aspects than is normally seen in this series this book is aimed at both the novice and the experienced researcher who wish for detailed information in the field of protein structure prediction a major intention here is to include important information that is needed in the day to day work of a research scientist important information that is not always decipherable in scientific literature protein structure prediction methods and protocols covers the topic of protein structure prediction in an eclectic fashion detailing aspects of prediction that range from sequence analysis a starting point for many algorithms to secondary and tertiary methods on into the prediction of docked complexes an essential point in order to fully understand biological function as this volume progresses the authors contribute their expert knowledge of protein structure prediction to many disciplines such as the identification of motifs and domains the comparative modeling of proteins and ab

hands on researchers describe in step by step detail 73 proven laboratory methods and bioinformatics tools essential for analysis of the proteome these cutting edge techniques address such important tasks as sample preparation 2d page gel staining mass spectrometry and post translational modification there are also readily reproducible methods for protein expression profiling identifying protein protein interactions and protein chip technology as well as a range of newly developed methodologies for determining the structure and function of a protein the bioinformatics tools include those for analyzing 2d gel patterns protein modeling and protein identification all laboratory based protocols follow the successful methods in molecular biologytm series format each offering step by step laboratory instructions an introduction outlining the principle behind the technique lists of the necessary equipment and reagents and tips on troubleshooting and avoiding known pitfalls

encyclopedia of bioinformatics and computational biology abc of bioinformatics three volume set combines elements of computer science information technology mathematics statistics and biotechnology providing the methodology and in silico solutions to mine biological data and processes the book covers theory topics and applications with a special focus on integrative omics and systems biology the theoretical methodological underpinnings of bcb including phylogeny are covered as are more current areas of focus such as translational bioinformatics cheminformatics and environmental informatics finally applications provide guidance for commonly asked questions this major reference work spans basic and cutting edge methodologies authored by leaders in the field providing an invaluable resource for students scientists

professionals in research institutes and a broad swath of researchers in biotechnology and the biomedical and pharmaceutical industries brings together information from computer science information technology mathematics statistics and biotechnology written and reviewed by leading experts in the field providing a unique and authoritative resource focuses on the main theoretical and methodological concepts before expanding on specific topics and applications includes interactive images multimedia tools and crosslinking to further resources and databases

this extensive thesis work covers several topics including intensity and polarization focusing on a new polarization bias reduction method vidal studied data from the wmap satellite which is low signal to noise and as such has to be corrected for polarization bias he presents a new method for correcting the data based on knowledge of the underlying angle of polarization using this novel method he sets upper limits for the polarization fraction of regions known to emit significant amounts of spinning dust emissions he also studies the large scale loops and filaments that dominate the synchrotron sky the dominant features are investigated including identification of several new features for the north polar spur a model of an expanding shell in the vicinity of the sun is tested which appears to fit the data implications for cmb polarization surveys are also discussed in addition vidal presents interferometric observations of the dark cloud ldn 1780 at 31 ghz and shows that the spinning dust hypothesis can explain the radio properties observed
