placement tests are rapidly joining the ranks of high stakes testing and college freshmen are required to take mathematics placement exams to determine their first mathematics course upon

entering college unfortunately these exams tend to place students in a lower level or remedial course as a result additional expenses are incurred degree programs are extended and scholarships awards and external funding are less likely helping student prepare for college mathematics placement tests a guide for teachers and parents includes two sample placement tests a guide that shows what entry course a student will be assigned with a given score and explanations on material that students might have forgotten or never quite understood this guide is sure to help students excel

many institutions use placement tests as a method to assess students readiness for college level coursework with the increased use of technology in testing many institutions have transitioned placement test administration to an online format in an unproctored setting while unproctored placement tests may provide financial and logistical benefits for institutions and students it is important to examine if there are differences in academic outcomes when tests are administered in this format guided by the literature on test administration modality i.e. proctored versus unproctored examinations i examined if there are differences in math course performance and college student enrollment persistence between students who completed a proctored or unproctored math placement test to investigate these important educational outcomes i analyzed data collected as part of a 2018 randomized control trial conducted at a large urban public institution in the mid atlantic region of the united states in which incoming first year students were randomly assigned to a proctored or unproctored group to complete a math placement assessment the current study affirmed findings from a pilot study which suggests that students tend to place approximately one course level lower when placed using a proctored math placement test compared to an unproctored placement test and that students tend to have higher final grades in their initial math course when placed by a proctored math placement test the current study analyzed final grades in the second math course taken between proctored and unproctored groups as well as student persistence analyzing mean course grades i found that differences in grades between students who take a proctored and unproctored math placement test continue in some cases into the second math course the percentage of f s and withdrawals for initial and second math course final grades between students who take a proctored and unproctored math placement assessment also show differences between groups applying hierarchical linear regression suggests that test administration modality does not account for a significant amount of variance in course grades when controlling for demographic characteristics and academic factors performance from the initial course taken was found to be the most significant factor of grades in second math course taken results from the current study suggests that test administration modality during math placement tests while not a statistically significant variable in academic performance in second math course taken may still be helpful as it is a statistically significant variable in academic performance in the first math course taken since initial math course grades were statistically significant in explaining the difference in grades between groups institutions should consider using proctoring during math placement tests as a practice further research should be conducted however to understand how test administration modality during placement tests affects students in different programs including programs that do not require courses along the institution s math course sequence additionally further research on types of proctoring would provide a more comprehensive understanding of the proctoring options available to institutions and whether they result in the same outcomes for students

the purpose of this qualitative study was to examine the perceptions that students and advisors administrators had regarding the mathematics placement process at a two year branch campus of a large urban mid western university participants in the study were 20 advisors administrators and 15 students qualitative data were collected from face to face semi structured interviews and focus groups placement test observations and placement test documents the student participants were students who had taken the compass esl computer adaptive math placement test and successfully completed a college level math course at the institution as well as students who had just recently taken the test the advisors administrators all had some level of involvement in the mathematics placement process at the institution therefore this research offered a unique opportunity to focus on the current mathematics placement process the results suggested that students want and need an opportunity to practice before they take the test this may encourage them to take the test more seriously furthermore the use of an entrepreneurial placement testing system should require that the recommendations made by them as to the procedures for administering the test be followed finally the institution is interested in implementing mandatory placement in mathematics this would include a well defined mathematics placement appeal process for students who believe they are not correctly placed by the test as well as the use of multiple measures to determine the placement of students in a mathematics course

there is growing concern that the remedial math courses taken by most community college students unnecessarily divert some students from earning a degree anecdotes of students who thought they had completed their math requirements in high school only to have remedial courses delay their progress through college are common in addition research has shown that african american and latino students are disproportionately affected frequently facing three or four remedial math classes redesigning the placement policies that assign students to these sequences could be as important as redesigning the curricula into which students are placed to address concerns about ineffective and inconsistent placement practices community colleges and some universities around the nation are adopting three types of reforms 1 changing tests 2 de emphasizing tests and 3 supporting students test taking such changes could reverberate across the educational segments from the universities that enroll community college transfer students to the k 12 schools expected to get students college ready this is the third report in degrees of freedom a series that explores the role of math as a gatekeeper in higher education it examines concerns that placement policies unfairly send the majority of community college students to remedial math deterring them from completing college it also considers how changes in these policies interact with university placement policies as well as with k 12 college readiness strategies for part 1 of this series see ed564291 for part 2 of this series see ed564295
