the temperature distribution within a sector of a hollow circular cylinder with temperature dependent thermophysical properties was analyzed based on exact mathematical solution the subject nonlinear differential equation was reduced to a linear differential equation by an integral transform and with the assumption that only the thermal conductivity is a function of temperature whereas the thermal diffusivity remains constant the solution was programmed in fortran 4 for application to an ibm 7094 in addition a successive transform applicable to the solution of similar problems involving temperature dependent thermal diffusivity is illustrated and discussed
