through an examination of case studies agency briefings and existing reports and drawing on personal knowledge and direct experience the committee on assessment of impediments to interagency cooperation on space and earth science missions found that candidate projects for multiagency collaboration in the development and implementation of earth observing or space science missions are often intrinsically complex and therefore costly and that a multiagency approach to developing these missions typically results in additional complexity and cost advocates of collaboration have sometimes underestimated the difficulties and associated costs and risks of dividing responsibility and accountability between two or more partners they also discount the possibility that collaboration will increase the risk in meeting performance objectives this committee s principal recommendation is that agencies should conduct earth and space science projects independently unless it is judged that cooperation will result in significant added scientific value to the project over what could be achieved by a single agency alone or unique capabilities reside within one agency that are necessary for the mission success of a project managed by another agency or the project is intended to transfer from research to operations necessitating a change in responsibility from one agency to another during the project or there are other compelling reasons to pursue collaboration for example a desire to build capacity at one of the cooperating agencies even when the total project cost may increase parties may still find collaboration attractive if their share of a mission is more affordable than funding it alone in these cases alternatives to interdependent reliance on another government agency should be considered for example agencies may find that buying services from another agency or pursuing interagency coordination

of spaceflight data collection is preferable to fully interdependent cooperation
