with the emergence of civilization the ancient human started thinking about the presence of stars planets and on the causes of different activities of nature the religious heads issued many ideas concerning the life of humans on earth and also concerning the universe and the supernatural powers with growing knowledge of science many of these ideas appear now as myths but many of these ideas transmitting from generation to generation have become so powerful that they are taken as faith we are to know the truth based on the actual observations without any imagination that is what is called science the scientific observations differ in many respects from the religious

ideas concerning human and the cosmic periods the second concern is the fight between theists faith in god and atheists no belief of existence of god many scientists would say is it necessary to bring god to create the universe when mother energy can perform to create the universe the author puts his logic behind the presence of a creator for the universe again there are many unpredictable equations in life such as prediction of future by enlightened saints their reading of other s thinking without the help of any instrument their abilities to cure critically ailing persons and many others which cannot be explained by the science of matter and energy but the observations cannot be denied all these issues have been discussed in the book
