participants in this workshop were asked to explore three related questions 1 how to create measures of undergraduate
 learning in stem courses 2 how such measures might be organized into a framework of criteria and benchmarks to assess
 instruction and 3 how such a framework might be used at the institutional level to assess stem courses and curricula to
 promote ongoing improvements the following issues were highlighted effective science instruction identifies explicit measurable
 learning objectives effective teaching assists students in reconciling their incomplete or erroneous preconceptions with new
 knowledge instruction that is limited to passive delivery of information requiring memorization of lecture and text contents is
 likely to be unsuccessful in eliciting desired learning outcomes models of effective instruction that promote conceptual
 understanding in students and the ability of the learner to apply knowledge in new situations are available institutions need
 better assessment tools for evaluating course design and effective instruction deans and department chairs often fail to
 recognize measures they have at their disposal to enhance incentives for improving education much is still to be learned from
 research into how to improve instruction in ways that enhance student learning

this book takes a fresh look at programs for advanced studies for high school students in the united states with a particular focus on the advanced placement and the international baccalaureate programs and asks how advanced studies can be significantly improved in general it also examines two of the core issues surrounding these programs they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education by looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs this report provides teachers parents curriculum developers administrators college science and mathematics faculty and the educational research community with a detailed assessment that can be used to guide change within advanced study programs

numerous teaching learning assessment and institutional innovations in undergraduate science technology engineering and mathematics stem education have emerged in the past decade because virtually all of these innovations have been developed independently of one another their goals and purposes vary widely some focus on making science accessible and meaningful to the vast majority of students who will not pursue stem majors or careers others aim to increase the diversity of students who enroll and succeed in stem courses and programs still other efforts focus on reforming the overall curriculum in specific disciplines in addition to this variation in focus these innovations have been implemented at scales that range from individual classrooms to entire departments or institutions by 2008 partly because of this wide variability it was apparent that little was known about the feasibility of replicating individual innovations or about their potential for broader impact beyond the specific contexts in which they were created the research base on innovations in undergraduate stem education was expanding rapidly but the process of synthesizing that knowledge base had not yet begun if future investments were to be informed by the past then the field clearly needed a retrospective look at the ways in which earlier innovations had influenced undergraduate stem education to address this need the national research council nrc convened two public workshops to examine the impact and effectiveness of selected stem undergraduate education innovations this volume summarizes the workshops which addressed such topics as the link between learning goals and evidence promising practices at the individual faculty and institutional levels classroom based promising practices and professional development for graduate students new faculty and veteran faculty the

workshops concluded with a broader examination of the barriers and opportunities associated with systemic change

the mission of the knowles science teaching foundation kstf to increase the quantity of high quality high school science and mathematics teachers in united states high schools calls for a deeper understanding of what it takes to prepare and support successful teachers on september 21 2006 kstf convened a group of 41 individuals with a broad range of perspectives and expertise to address three essential questions with regard to secondary science teacher preparation what do we know what do we need to find out and what research will help us fill in the gaps participants were intentionally selected from a diverse cross section of the education community and included teachers educational researchers teacher educators policy specialists and scientists the 41 participants formed 12 working groups and spent two and a half days addressing the following aspects of teacher preparation recruitment and retention models of secondary science teacher preparation pedagogic preparation including field based experiences methods courses and preparing teachers for diverse populations content preparation in biology chemistry earth science and physics as well as the nature of science in general induction mentoring each working group was tasked with synthesizing their discussions and conclusions for the entire group of conference participants and in a written document this volume represents the final outcome of that conference 12 chapters that reflect the work of 40 dedicated scholars and practitioners who share a deep commitment to the pursuit of excellence in the preparation of secondary science teachers
