this book is based on the workshop on new approaches to learning for natural language processing held in conjunction with the international joint conference on artificial intelligence ijcai 95 in montreal canada in august 1995 most of the 32 papers included in the book are revised selected workshop presentations some papers were individually solicited from members of the workshop program committee to give the book an overall completeness also included and written with the novice reader in mind is a comprehensive introductory survey by the volume editors the volume presents the state of the art in the most promising current approaches to learning for nlp and is thus compulsory reading for researchers in the field or for anyone applying the new techniques to challenging real world nlp problems

th the 15 international conference on applications of natural language to information systems nldb 2010 took place during june 23 25 in cardiff uk since the first edition in 1995 the nldb conference has been aiming at bringing together resear ers people working in industry and potential users interested in various applications of natural language in the database and information system area however in order to reflect the growing importance of accessing information from a diverse collection of sources databases sensors cloud in an equally wide range of contexts cluding mobile and tethered the theme of the 15th international conference on plications of natural language to information systems 2010 was communicating with anything anywhere in natural language natural languages

and databases are core components in the development of information systems. Natural language processing (NLP) techniques may substantially enhance most phases of the information system lifecycle starting with requirement analysis, specification and validation and going up to conflict resolution, result processing and presentation. Furthermore, natural language based query languages and user interfaces facilitate the access to information for all and allow for new paradigms in the usage of computerized services. Hot topics such as information retrieval (IR), software engineering applications, hidden Markov models, natural language interfaces and semantic networks and graphs imply a complete fusion of databases, IR and NLP techniques.

This handbook provides a comprehensive guide on how natural language processing (NLP) can be leveraged to enhance various aspects of requirements engineering (RE), leading the reader from the exploration of fundamental concepts and techniques to the practical implementation of NLP for RE solutions in real world scenarios. The book features contributions from researchers with both academic and industrial experience. It is organized into three parts, each focusing on different aspects of applying NLP to RE. Part I: NLP for downstream RE tasks delves into the application of NLP techniques to tasks that are typically part of the RE process. It includes chapters on NLP for requirements classification, requirements similarity and retrieval, requirements traceability, defect detection and automated terminology and relations extraction. Part II: NLP for specialised types of requirements and artefacts explores how NLP can be tailored to handle specific requirement types and artefacts. The chapters cover legal requirements processing, privacy requirements acquisition and analysis, user feedback intelligence mining, issue trackers and analysis of user story requirements. Eventually, Part III: NLP for RE in practice addresses practical applications and tools for implementing NLP in RE. It includes a chapter on the different tools that use NLP techniques for RE tasks, followed by chapters on empirical evaluation of tools, practical guidelines for selecting and evaluating NLP techniques, guidelines on using large language models (LLMs) in RE and dealing with data challenges in RE. The

book is designed for a diverse audience including ph d students researchers and practitioners ph d students can benefit from a comprehensive guide to the topic of nlp for re and acquire the essential background for their studies researchers can identify further triggers for scientific exploration based on the currently settled knowledge in the field eventually practitioners facing challenges with nl requirements can find practical insights to enhance their re processes using nlp

the volume explores key convergences between cognitive and discourse approaches to language and language learning both first and second the emphasis is on the role of language as it is used in everyday interaction and as it reflects everyday cognition the contributors share a usage based perspective on language whether they are examining grammar or metaphor or interactional dynamics which situates language as part of a broader range of systems which underlie the organization of social life and human thought while sharing fundamental assumptions about language the particulars of the areas of inquiry and emphases of those engaged in discourse analysis versus cognitive linguistics are diverse enough that historically many have tended to remain unaware of the interrelations among these approaches thus researchers have also largely overlooked the possibilities of how work from each perspective can challenge inform and enrich the other the papers in the volume make a unique contribution by more consciously searching for connections between the two broad approaches the results are a set of dynamic thought provoking analyses that add considerably to our understanding of language and language learning the papers represent a rich range of frameworks within a usage based approach to language cognitive grammar mental space and blending theory construction grammar ethnomethodology and interactional sociolinguistics are just some of the frameworks used by the researchers in this volume the particular subjects of inquiry are also quite varied and include first and second language learning signed language syntactic phenomena interactional regulation and dynamics discourse markers metaphor theory polysemy language processing and humor the volume is of interests to researchers in cognitive linguistics discourse and conversational analysis and first and second language learning as well as signed languages
