developing a system that can cope with variations of system or control parameters measurement uncertainty and complex multi objective optimization criteria is a frequent problem in engineering systems design the need for a priori knowledge and the inability to learn from past experience make the design of robust adaptive and stable systems a difficult task innovation in power control and optimization emerging energy technologies unites research on the development of techniques and methodologies to improve the performance of power systems energy planning and environments controllers and robotics operation research and modern artificial computational intelligent techniques containing research on power engineering control systems and methods of optimization this book is written for professionals who want to improve their understanding of strategic developments in the area of power control and optimization

the types of articles most sought after by naval research logistics fall into the following classes i modeling and analysis of problems motivated by current real world applications ii exploratory modeling and analysis of problems motivated by potential future real world applications iii major methodological advances and iv expository pieces of exceptional clarity areas represented include but are not limited to probability statistics simulation optimization game theory scheduling reliability inventory decision analysis and combatmodels

this remarkable account describes the development of the principal method used in the automatic control of machine tools by computer means the book will interest all those involved in planning and implementing innovative industrial research programs along with historians of technology and engineering

the problem dealt with in this report is the multiple choice integer program mcip a special case of the integer linear programming problem with binary variables in this problem the variables are partitioned using the classical definition of partition exactly one variable in each partitioning set has the value one in any feasible solution and all other variables have the value zero the problem also allows any additional constraints that can be expressed as linear inequalities the objective is to choose elements from these sets so as to minimize cost chapter 2 discusses the history of this problem and solution techniques developed for it and similar problems such as the classical

assignment problem the generalized assignment problem the multiple choice problem the generalized upper bounding problem and the multiple choice knapsack problem chapter 3 presents discussion of additive type algorithms and the algorithm proposed in this report it also includes definitions and notations applications of this algorithm follow in chapter 4 with worked examples for three problems a scheduling problem an assembly line balancing problem and a distribution problem in chapter 5 it is proven that the algorithm will correctly solve any problem of this type in finite time in chapter 6 Geoffrion's surrogate constraints are revised to take advantage of the additional structure in this problem three possible formulations of surrogate constraint lp's are presented by taking advantage of the special structure of the mcip the size of the lp's relative to those used for general binary programming is greatly reduced author

the second edition of this book provides a comprehensive introduction to a consortium of technologies underlying soft computing an evolving branch of computational intelligence which in recent years has turned synonymous to it the constituent technologies discussed comprise neural network nn fuzzy system fs evolutionary algorithm ea and a number of hybrid systems which include classes such as neuro fuzzy evolutionary fuzzy and neuro evolutionary systems the hybridization of the technologies is demonstrated on architectures such as fuzzy backpropagation network nn fs hybrid genetic algorithm based backpropagation network nn ea hybrid simplified fuzzy artmap nn fs hybrid fuzzy associative memory nn fs hybrid fuzzy logic controlled genetic algorithm ea fs hybrid and evolutionary extreme learning machine nn ea hybrid every architecture has been discussed in detail through illustrative examples and applications the algorithms have been presented in pseudo code with a step by step illustration of the same in problems the applications demonstrative of the potential of the architectures have been chosen from diverse disciplines of science and engineering this book with a wealth of information that is clearly presented and illustrated by many examples and applications is designed for use as a text for the courses in soft computing at both the senior undergraduate and first year postgraduate levels of computer science and engineering it should also be of interest to researchers and technologists desirous of applying soft computing technologies to their respective fields of work

brings together a selection of the major works in planning which relate to the provision of public facilities this volume also looks at some of the novel approaches in the provision of public facilities and concludes with a selection of case studies that demonstrate the application of a set of planning approaches
