chronological interval on the relation of alchemy and chemistry to medicine philosophy religion and to the corpuscular philosophy in the sixteenth and seventeenth centuries the relations between medicina and alchemy in the lullian treatises were examined in the opening paper by michela pereira based on researches on unpublished manuscript sources in the period between the 14th and 17th centuries it is several decades since the researches of r f multhauf gave a prominent role to johannes de rupecissa in linking medicine and alchemy through the concept of a quinta essentia michela pereira explores the significance of the lullian tradition in this development and draws attention to the fact that the early paracelsians had themselves recognized a family resemblance between the works of paracelsus and roger bacon s scientia experimentalis and indeed a continuity with the lullian tradition

chapter i the explanation of material changes given by the greek thinkers for thousands of years before men had any accurate and exact knowledge of the changes of material things they had thought about these changes regarded them as revelations of spiritual truths built on them theories of things in heaven and earth and a good many things in neither and used them in manufactures arts and handicrafts especially in one very curious manufacture wherein not the thousandth fragment of a grain of the finished article was ever produced the accurate and systematic study of the changes which material things undergo is called chemistry we may perhaps describe alchemy as the superficial and what may be called subjective examination of these changes and the speculative systems and imaginary arts and manufactures founded on that examination we are assured by many old writers that adam was the first alchemist and we are told by one of the initiated that adam was created on the sixth day being the 15th of march of the first year of the world certainly alchemy had a long life for chemistry did not begin until about the middle of the 18th century no branch of science has had so long a period of incubation as chemistry there must be some extraordinary difficulty in the way of disentangling the steps of those changes wherein substances of one kind are produced from substances totally unlike them to inquire how those of acute intellects and much learning regarded such occurrences in the times when man s outlook on the world was very different from what it is now ought to be interesting and the results of that inquiry must surely be instructive if the reader turns to a modern book on chemistry for instance the story of the chemical elements in this series he will find at first superficial descriptions of special instances of those occurrences which are the subject of the chemist s study he will learn that only certain parts of such events are dealt with in chemistry more accurate descriptions will then be given of changes which occur in nature or can be produced by altering the ordinary conditions and the reader will be taught to see certain points of likeness between these changes he will be shown how to disentangle chemical occurrences to find their similarities and differences and gradually he will feel his way to general statements which are more or less rigorous and accurate expressions of what holds good in a large number of chemical processes finally he will discover that some generalisations have been made which are exact and completely accurate descriptions applicable to every case of chemical change but if we turn to the writings of the alchemists we are in a different world there is nothing even remotely resembling what one finds in a modern book on chemistry here are a few quotations from alchemical writings it is necessary to deprive matter of its qualities in order to draw out its soul copper is like a man it has a soul and a body the soul is the most subtle part that is to say the tinctorial spirit the body is the ponderable material terrestrial thing endowed with a shadow after a series of suitable treatments copper becomes without shadow and better than gold the elements grow and are transmuted because it is their qualities not their substances which are contrary stephanus of alexandria about 620 a d

in this fascinating history cathy cobb and harold goldwhite celebrate not only chemistry s theories and breakthroughs but also the provocative times and personalities that shaped this amazing science and brought it to life throughout the book the reader will meet the hedonists and swindlers monks and heretics and men and women laboring in garages and over kitchen sinks who expanded our understanding of the elements and discovered such new substances as plastic rubber and aspirin creations of fire expands our vision of the meaning of chemistry and reveals the oddballs and academics who have helped shape our world
