the digital age is affecting all aspects of historical study but much of the existing literature about history in the digital age can be alienating to the traditional historian who does not necessarily value or wish to embrace digital resources history in the digital age takes a more conceptual look at how the digital age is affecting the field of history for both scholars and students the printed copy the traditional archive and analogue research remain key constitute parts for most historians and for many will remain precious and esteemed over digital copies but there is a real need for historians and students of history to seriously consider some of the conceptual and methodological challenges facing the field of historical enquiry as we enter the twenty first century including international contributors from a variety of disciplines

as the plugged in presidential campaign has arguably reached maturity presidential campaigning in the internet age challenges popular claims about the democratizing effect of digital communication technologies dcts analyzing campaign strategies

structures and tactics from the past six presidential election cycles Stromer Galley reveals how for all their vaunted inclusivity and tantalizing promise of increased two way communication between candidates and the individuals who support them, candidates have done little to change the fundamental dynamics of campaigns. The expansion of new technologies has presented candidates with greater opportunities to micro target potential voters, cheaper and easier ways to raise money and faster and more innovative ways to respond to opponents. The need for communication control and management, however, has made campaigns slow and loathe to experiment with truly interactive internet communication technologies. Citizen involvement in the campaign historically has been and as this book shows continues to be a means to an end: winning the election for the candidate. For all the proliferation of apps to download, polls to click, videos to watch and messages to forward, the decidedly undemocratic view of controlled interactivity is how most campaigns continue to operate. In the fully revised second edition, *Presidential Campaigning in the Internet Age* examines election cycles from 1996 when the world wide web was first used for presidential campaigning through 2016 when campaigns had the full power of advertising on social media sites. As the book charts changes in internet communication technologies, it shows how even as campaigns have moved from a mass mediated to a networked paradigm, the possibilities these shifts in interactivity seem to promise for citizen input and empowerment remain farther than a click away.

Since the earliest days of our nation, new communications and transportation networks have enabled vast changes in how and where Americans live and work. Transcontinental railroads and telegraphs helped to open the West. Mass media and interstate highways paved the way for suburban migration. In our own day, the internet and advanced logistics networks are enabling new changes on the landscape with both positive and negative impacts on our efforts to conserve land and biodiversity. Emerging technologies have led to tremendous innovations in conservation science and resource management as well as education and advocacy efforts. At the same time, new networks have been powerful enablers of decentralization, facilitating sprawling development into previously undesirable or inaccessible areas. *Conservation in the Internet Age* offers an innovative cross disciplinary perspective on critical changes on the land and in the field of conservation. The book provides a general overview of the impact of new technologies and networks, explores the potentially disruptive impacts of the new networks on open space and biodiversity, presents case studies of innovative ways that conservation organizations are using the new networks to pursue their missions, considers how rapid change in the internet age offers the potential for landmark conservation initiatives. *Conservation in the Internet Age* is the first book to examine

the links among land use technology and conservation from multiple perspectives and to suggest areas and initiatives that merit further investigation it offers unique and valuable insight into the challenges facing the land and biodiversity conservation community in the early twenty first century and represents an important new work for policymakers conservation professionals and academics in planning design conservation and resource management policy and related fields

dialogic education for the internet age argues that despite rapid advances in communications technology most teaching still relies on traditional approaches to education built upon the logic of print and dependent on the notion that there is a single true representation of reality in practice the use of the internet disrupts this traditional logic of education by offering an experience of knowledge as participatory and multiple this new logic of education is dialogic and characterises education as learning to learn think and thrive in the context of working with multiple perspectives and ultimate uncertainty the book builds upon the simple contrast between observing dialogue from an outside point of view and participating in a dialogue from the inside before pinpointing an essential feature of dialogic the gap or difference between voices in dialogue which is understood as an irreducible source of meaning each chapter of the book applies this dialogic thinking to a specific challenge facing education re thinking the challenge and revealing a new theory of education areas covered in the book include dialogical learning and cognition dialogical learning and emotional intelligence educational technology dialogic spaces and consciousness global dialogue and global citizenship dialogic theories of science and maths education the challenge identified in wegerif s text is the growing need to develop a new understanding of education that holds the potential to transform educational policy and pedagogy in order to meet the realities of the digital age dialogic education for the internet age draws upon the latest research in dialogic theory creativity and technology and is essential reading for advanced students and researchers in educational psychology technology and policy
