catalysis in asymmetric synthesis 2nd edition asymmetric synthesis has become a major aspect of modern organic chemistry the stereochemical properties of an organic compound are often essential to its bioactivity and the need for stereochemically pure pharmaceutical products is a key example of the importance of stereochemical control in organic synthesis however achieving high levels of stereoselectivity in the synthesis of complex natural products represents a considerable intellectual and practical challenge for chemists written from a synthetic organic chemistry perspective this text provides a practical overview of the field illustrating a wide range of transformations that can be achieved the book captures the latest advances in asymmetric catalysis with emphasis placed on non enzymatic methods topics covered include reduction of alkenes ketones and imines nucleophilic addition to carbonyl compounds catalytic carbon carbon bond forming reactions catalytic reactions involving metal carbenoids conjugate addition reactions catalysis in asymmetric synthesis bridges the gap between undergraduate and advanced level textbooks and provides a convenient point of entry to the primary literature for the experienced synthetic organic chemist

the understanding at the molecular level of the interactions between innate and adaptive arms of the immune system is currently a hot topic particularly to those interested in immunology especially susceptibility to infectious diseases this book provides a survey of topics in the area of innate and adaptive immunity which have been researched within the mrc immunochemistry unit at oxford university over a period of forty years the topics include antibody structure for which the first director of the immunochemistry unit professor rr porter was awarded a nobel prize in 1972 the characterization of membrane proteins on lymphoid cells leading to the concept of these molecules belonging to an immunoglobulin super family the proteins of the human serum complement system one of the body s major defences against microbial infection the human cell surface integrins and the hyaluronan binding proteins which are involved in regulation of inflammation at cell surfaces and within the extracellular matrix the family of collectin molecules containing

distinct globular carbohydrate binding domains linked to collagen like regions which play important roles in innate immunity in the lungs and bloodstream by immediate recognition and clearance of microbial pathogens each chapter in the book gives a brief historical background to a topic and then provides a survey of recent advances in the field and are written by internationally recognised renowned experts the theme running through the chapters is that of protein structure function relationships including amongst others descriptions of quaternary structures of large oligomeric proteins of factor h and c1q binding to specific ligands and of the chemistry of the mechanism of catalysis of covalent binding of activated c3 and c4 proteins to nucleophilic groups on microbial surfaces in several chapters excellent descriptions are given with respect to how the immune system can be recruited to combat microbial infection via proteins of both the innate and adaptive immune systems the book also includes notable chapters which are excellent examples of the importance of how the isolation characterisation protein engineering and crystallisation has resulted in a full understanding of complex protein protein interactions involved in the recognition and triggering events of important sections of the immune system structure and function of the c1 complex gÚrard j arlaud chemical engineering of therapeutic antibodies george t stevenson leukocyte surface proteins purification and characterisation a neil barclay cell surface integrins suet mien tan and s k alex law this book is aimed primarily at established senior research scientists postdoctoral research scientists and phd students who have an interest in proteins of the immune system however the wide range of immunity system topics while staying broadly within innate adaptive immunity will also appeal to a wider audience

the promise of these semanticatits most expansive is to allow knowledge to be freely accessed and exchanged by software it is now recognized that if the semanticweb is to contain deep knowledge then the need for new representation and reasoning techniques is going to be critical these techniques need to find the right trade off between expressiveness scalability and robustness to deal with the inherently incomplete contradictory and uncertain nature of knowledge on the the international conference on reasoning and rule systems rr was founded to address these needs and has grown into a major international forum in this area the third rr conference was held during october 25 26 2009 in chantilly virginia co located with the international semantic conference iswc 2009 this year 41 papers were submitted from authors in 21 countries the program committee performed outstandingly to ensure that each paper submitted to rr 2009 was thoroughly reviewed by at least three referees in a short period of time the resulting conference presented papers of high quality on

many of the key issues for reasoning on the semantic rr 2009 was fortunate to have two distinguished invited speakers robert kowalski in his talk tegrating logic programming and production systems with abductive logic programming agents addressed some of the fundamental considerations hind reasoning about evolving systems benjamin grossof s talk silk higher level rules with defaults and semantic scalability described the design of a major next generation rule system the invited tutorial uncertainty reas ing for the semantic by thomas lukasiewicz provided perspectives on a central issue in this area

this volume represents the 2009 jairo charris seminar in symmetries of differential and difference equations which was held at the universidad sergio arboleda in bogota colombia the papers include topics such as lie symmetries equivalence transformations and differential invariants group theoretical methods in linear equations namely differential galois theory and stokes phenomenon and the development of some geometrical methods in theoretical physics the reader will find new interesting results in symmetries of differential and difference equations applications in classical and quantum mechanics two fundamental problems of theoretical mechanics the mathematical nature of time in lagrangian mechanics and the preservation of the equations of motion by changes of frame and discrete hamiltonian systems arising in geometrical optics and analogous to those of finite quantum mechanics this book is published in cooperation with instituto de matematicas y sus aplicaciones ima

this book constitutes the refereed proceedings of the international conference on automated reasoning with analytic tableaux and related methods tableaux 2002 held in copenhagen denmark in july august 2002 the 20 revised full papers and two system descriptions presented together with two invited contributions were carefully reviewed and selected for inclusion in the book all current issues surrounding the mechanization of logical reasoning with tableaux and similar methods are addressed among the logic calculi investigated are linear logic temporal logic modal logics hybrid logic multi modal logics fuzzy logics goedel logic lukasiewicz logic intermediate logics quantified boolean logic and of course classical first order logic

the workshop on group theory and numerical analysis brought together scientists working in several different but related areas the unifying theme was the application of group theory and geometrical methods to the solution of differential and difference equations the emphasis was on the combination of analytical and numerical methods and also the use of symbolic computation this meeting was

organized under the auspices of the centre de recherches mathematiques universite de montreal canada this volume has the character of a monograph and should represent a useful reference book for scientists working in this highly topical field

texts documents and extracts chiefly from mss in the bodleian and other oxford libraries

provides a comprehensive treatment of surface chemistry and its applications to chemical engineering biology and medicine focuses on the chemical and physical structure of oil water interfaces and membrane surfaces details interfacial potentials ion solvation and electrostatic instabilities in double layers
