this book is dedicated to professor martin wirsing on the occasion of his emeritation from ludwig maximilians universität in munich germany the volume is a reflection with gratitude and admiration on professor wirsing s life highly creative remarkably fruitful and intellectually generous life it also gives a snapshot of the research ideas that in many cases have been deeply influenced by professor wirsing s work the book consists of six sections the first section contains personal remembrances and expressions of gratitude from friends of professor wirsing the remaining five sections consist of groups of scientific papers written by colleagues and collaborators of professor wirsing which have been grouped and ordered according to his scientific evolution more specifically the papers are concerned with logical and algebraic foundations algebraic specifications institutions and rewriting foundations of software engineering service oriented systems and adaptive and autonomic systems

this book constitutes the thoroughly refereed post conference proceedings of the second ifip tc 2 central and east european conference on software engineering techniques cee set 2008 held in brno czech republic in october 2008 the 20 revised full papers presented together with a keynote speech were carefully reviewed and selected from 69 initial submissions the papers are organized in topical sections on requirements specification design modeling software product lines code generation project management and quality

new miniature version the ability to wield typography is one of those things that is a clear indication of a talented designer being able to craft type well and thoughtfully takes a deep

understanding of the inherent complexities and a keen eye for the minute and subtle details this book contains a collection of 1 000 instances of thoughtful type usage along with credits that note what fonts were used in the design like its predecessor 1 000 graphic elements the photography in this book focuses in on the typography so readers can get an up close look at the work 1 000 type treatments showcases an array of fonts in a catalog like format making it easy for the working designer to practically shop for ideas the book is organized by style so if a designer has a traditional elegant or edgy piece they can go directly to that section of the book where they will find a wide collection of fresh ideas in the style they are seeking also included is a directory of font foundries and suppliers providing busy designers with a quick reference guide to where they can find the fonts that pique their interest

these proceedings report the scientific results of an international workshop on methodology and software for interactive decision support organized jointly by the system and decision sciences program of the international institute for applied systems analysis nasa located in laxenburg austria and the national committee for applied systems analysis and management in bulgaria several other bulgarian institutions sponsored the workshop the committee for science to the council of ministers the state committee for research and technology and the bulgarian industrial association the workshop was held in albena on the black sea coast more than 80 scientists from 15 countries attended the workshop 50 lectures were presented and 17 computer demonstration sessions took place this workshop is one of a series of meetings organized by nasa with the collaboration of scientific institutions from the national member organization countries the previous meetings took place in austria 1983 hungary 1984 and the german democratic republic 1985 all proceedings of these meetings have been published by springer verlag in the series lecture notes in economics and mathematical systems

this book like its companion volume nonlinear optimization with financial applications is an outgrowth of undergraduate and postgraduate courses given at the university of hertfordshire and the university of bergamo it deals with the theory behind numerical methods for nonlinear optimization and their application to a range of problems in science and engineering the book is intended for final year undergraduate students in mathematics or other subjects with a high mathematical or computational content and exercises are provided at the end of most sections the material should also be useful for postgraduate students and other researchers and practitioners who may be concerned with the development or use of optimization algorithms it is assumed that readers have an understanding of the algebra of matrices and vectors and of the taylor and mean value theorems in several variables prior experience of using computational techniques for solving systems of linear equations is also desirable as is familiarity with the behaviour of iterative algorithms such as newton's method for nonlinear equations in one variable most of the currently popular methods for continuous nonlinear optimization are described and given at least an intuitive justification relevant convergence results are also outlined and we provide proofs of these when it seems instructive to do so this theoretical material is complemented by numerical illustrations which give a flavour of how the methods perform in practice

this proceedings contains tutorials presented at the nato advanced study institute on design

and implementation of optimization software urbino italy 20 june 2 july 1977 organized by the committee on algorithms coal of the mathematical programming society the authors are to be congratulated on their clear expositions plus their prompt cooperation we were especially fortunate to have had two of the first pioneers in designing mathematical programming systems w orchard hays and e m l beale surveying the contents the reader will find that the papers fall into three categories which we can roughly designate by linear programming extensions of linear programming and non linear programming in the first category on linear programming the three back ground papers by w orchard hays capture a historical perspective through the scope of modern systems while t j dekker s paper provides background in numerical methods used in optimization software one area neglected by most previous mathematical programming symposia is the information structure employed to manipulate large volumes of data the tutorial on matricial packing by h j greenberg includes modern structures including recent suggestions by j kalan and d rarick another tutorial on pivot selection describes the vast range of tactics that have evolved aimed at reducing computational effort with the strategy of the simplex method
